Rejections based on 35 U.S.C. 112, second paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3, 4, 7, 8, 11, 12, 16 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 3 and 4, it is unclear how it can be determined whether or not a particular position aid peg meets the material with similar thermal expansion limitation. More particularly, if one uses the a peg with a first impression material having first thermal expansion properties and then uses the same peg with a second impression material having different thermal expansion properties, then it is entirely possible that the same exact peg might meet the claim limitations with the first use, but not the second, even though it is the exact same peg. The claimed positional aid depends not on structure that is specifically set forth claims, but on how some unknown user intends to use it.

Rejections based on Prior Art

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3732

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams (US 1,397,192).

Williams discloses an elongated peg 4 having a narrowed cross-section area 20 at one end and an enlarged portion 16 at the other end that extends at an angle. In regard to the intended use of the peg for positioning denture pieces, the Williams peg is capable of such a use. The intended use of the claimed peg fails to impose any objectively ascertainable structural distinctions from the peg disclosed by Williams. In regard to claims 3 and 4, the Williams peg is capable of use with a material having a similar thermal expansion. In regard to claims 5-8 and 14-19, note apertures 13 in the enlarged portion 16 of the elongated peg. In regard to claims 9-13, note the tapered edges at 15. Finally in regard to claims 21-23, note the adhesive 5 securing the pin 4 to the tooth 2

Examiner Comment's

Applicant's disclosure appears to be directed to a method of using pegs to repair broken dentures. It is suggested that applicant focus the claims upon the repair method, rather than on common mechanical pegs and pins.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry concerning this communication should be directed to **Ralph Lewis** at telephone number **(571) 272-4712.** Fax (571) 273-8300. The examiner works a

compressed work schedule and is unavailable every other Friday. The examiner's

supervisor, Kevin Shaver, can be reached at (571) 272-4720.
